

The Second International Symposium

MEDICINAL PLANTS AND MATERIALS

(MPM-2019)

15 to 17 February 2019, Tozeur (South of Tunisia)

Medicinal Plants and Materials

On behalf of the Organizing Committee, we warmly welcome you to **Tozeur** (South Tunisia) and look forward to your participation in this symposium from 15 to 17 February 2019.

The MPM-2019 program will include plenary lectures, oral presentations and poster presentations. The official languages of the congress will be French and English.

OBJECTIVES

The Second International Symposium Medicinal Plants and Materials MPM-2019 is an international congress which provides an open forum for academic researchers and industrials to present their original works and projects and exchange ideas and technological experiences.

The second edition of MPM-2019 is intended to intensify and promote cooperation between academia, research institutions and relevant industries. It is also hoped that the conference will promote innovation and creativity among researchers working in the sustainable process and make important contributions to the industry of the future.

The main objective of this conference is:

- Provide many opportunities for participants to share their experience and develop contacts and partnerships to build common strategies for medicinal plants, materials and rational use and conversion of biomass.
- Highlight the medicinal and socio-economic importance of plants and the valorization of biomass.

Medicinal Plants and Materials

- Encourage the production, processing and conservation of medicinal plants and develop green extraction of bio-based molecules.
- Discuss new methods of the synthesis and the functionalization of materials and recent applications.

TOPICS

1. Natural Substances

- Biodiversity and conservation of medicinal plants,
- Biological activities of natural products,
- Techniques of extraction and valorization of natural substances.

2. Valorization and waste management

- Fibers and polymers,
- Management and valorization of bio-resources and industrial waste.
- Valorization engineering: Biomass, Biomaterials, Biogas, Biodrying, Activated carbon,
- Treatment of industrial wastes and their environmental impacts.

3. Materials and nanomaterials

- Synthesis of innovative materials,
- Chemical modification,
- Functionalization of materials.
